EtherCAT Solution and Automation Controller Overview

Introduction

EtherCAT is a standard protocol able to connect drives, sensors and I/O devices, and is now a popular control fieldbus in the Industrial Automation sector. Advantech, to fulfill demands of smart factories and equipment manufacturers, provides an EtherCAT IO and EtherCAT master controller portfolio.

Real-time I/O for Industry 4.0

To bridge IT and OT, data needs to be aggregated from the field. Following current trends, different data types and volume from the field will grow exponentially, therefore traditional SCADA systems with standard I/O will become overwhelmed trying to handle complex and time sensitive tasks. In the meantime, Ethernet-based real-time I/O solutions have become price-acceptable in the market. Controllers with time-deterministic responses and low cycle-times not only provide a very good solution, but they also reduce the huge effort required for integrators to handle all data communications.

Real-time I/O for Machine Control

EtherCAT features high speeds, deterministic data performance, and synchronization. These can fulfill serial servo network requirements of equipment manufacturers. With standard based EtherCAT, machine builders can design with off-the-shelf ETG certified products. In addition, all products from different vendors connected on the same EtherCAT bus can communicate with each other to achieve complex motion and IO control.

APAX-5000 with EtherIO

APAX-5000 is the first generation of real-time I/O systems from Advantech. It has hot swappable and high density I/O features, and is a competitive solution for facility and factory monitoring applications. APAX-5000 I/O system can be attached to general embedded systems, and can easily enable an embedded system to deliver 1ms real-time capability for a maximum 768 I/O points.

Control Platform with EtherCAT Slice I/O Expansion

The trend in controller platforms is for smaller and more powerful applications. AMAX-5500 series are designed for automation users. Their fanless design provides high reliability and their compact size facilitates installation in space limited cabinets. A front-accessible design facilitates easy installation and maintenance. They are not only reliable and user friendly, but they also enhance I/O scalability. I/O expansion is through an EtherCAT slice I/O interface on the right hand side. One the other side, it can be expanded for GigE PoE / USB 3.0 / serial / CAN / Wireless interfaces (AMAX-5580 only). Its high flexibility makes it a perfect embedded automation platforms that can fulfill most requirements for smart factory solutions.

AMAX-4800/AMAX-5000 with EtherCAT

AMAX-4800 series is a pioneer of EtherCAT I/O. It features high volume I/O with good C/P ratio and user friendly designs. If a customer faces the challenge of limited space, AMAX-5000 series offers great flexibility for future I/O expansion. It has an EtherCAT modularized slice I/O architecture in a very compact and slim form factor. Plus, the easy slide-in design reserves space for extra expansion capability for future demands.

AMAX-5400 PCIe Expansion Module

- Supports Max 4 slots, and supports PCIe4 for first slot
- Auto board ID configuration for software identification
- Full-bandwidth USB3.0 for vision application
- Multiple interface : USB3.0, PoE /GigE, RS-232/422/485, CAN, Wireless
- AMAX-5400E with PCI-mini +SIM card slot for cellular networking

AMAX-5000 EtherCAT Slice I/O Module

- Standard EtherCAT slave
- Compact design and easy for slide-in
- Removable push-in terminal
- Supports centralized and decentralized I/O topology
- Supports multi-range for one module
- Sample rate 100S/s per channel for analogue Input
- LED indicator for status check
- Wide operation temperature from -25~60°C

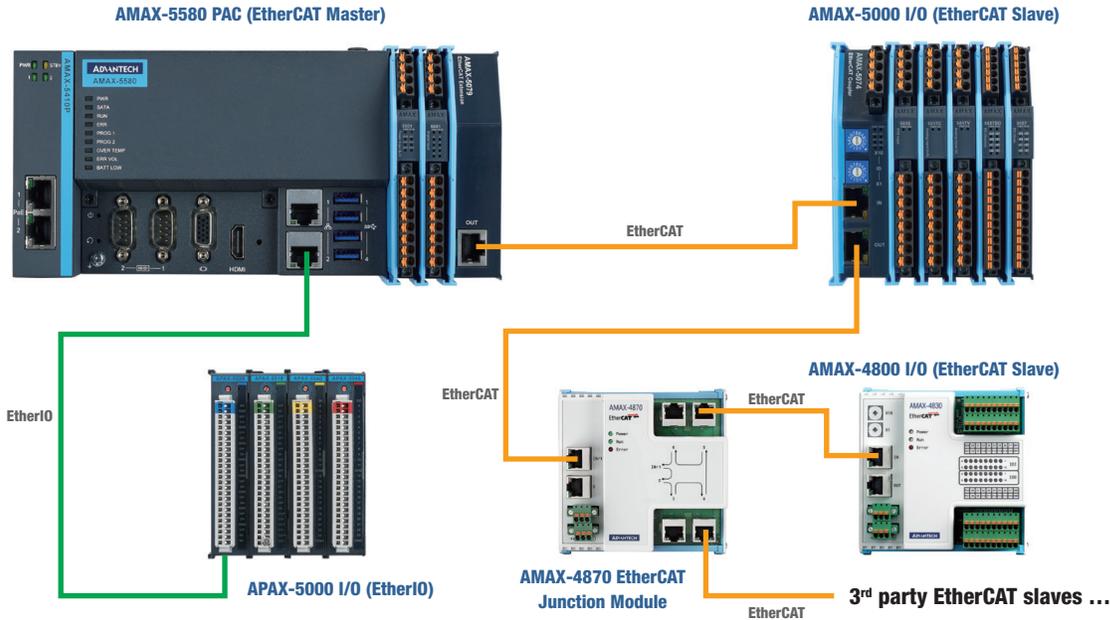

AMAX-5500 Control Platform

- Intel 6th Generation Core i7/ i5/ Celeron / Intel Atom X series
- DDR4 4G/8G memory
- Internal expansion slot for PCIe-mini card / M.2
- Rich peripherals: HDMI, GbE, serial, CAN, USB
- Windows Embedded 10 support
- Dual power input and hardware monitoring
- CE/FCC/UL certification

AMAX-5000 System

AMAX-5500 series:

EtherCAT Master Controller

- **AMAX-5580** Intel® Core™ i7/i5/Celeron® Control Platform (Selectable CODESYS ready solution)

- **AMAX-5570** Intel® Atom™ Control Platform (Selectable CODESYS ready solution)

AMAX-5000 series:

EtherCAT Slave I/O

- **AMAX-5001** EtherCAT power module
- **AMAX-501X** EtherCAT AI module
- **AMAX-502X** EtherCAT AO module

CODESYS Ready Edge Controller Overview

Integrated PC-based SoftPLC & SoftMotion Control Solutions

Based on Flexible Expansion I/O Modules offer Focus Solution Package

Introduction

PC-Based edge controllers are powered by CODESYS control kernel Soft-PLC equipped with Industrial Ethernet and Fieldbus for OT applications. Support for IEC-61131-3 PLCopen languages enables engineers to easily program PLCs and SoftMotion and CNC Robotics modules for various motion control applications. To provide comprehensive control solutions, Advantech also offers flexible expansion options, including industrial Ethernet I/O, peripheral I/O, slice I/O, and distributed I/O modules. Moreover, to ensure easy data access with IT-OT integration, uplink connectivity with MQTT, OPC UA and ODBC (database) protocol support is provided. The platform portal utility's self-diagnosis function enhances controller reliability. Furthermore, Advantech's WISE-PaaS platform can be leveraged for field-side management to improve legacy machinery to intelligent (M2) to enhance productivity and equipment flexibility.

Real-Time Industrial Ethernet & Fieldbus SoftLogic for OT Control

AMAX-600 series offer split-core and split-systems to make edge control more reliable by integrating IPC platform and PLC to provide a cost effective field application. IEC-61131-3 PLC open cross language platform for PLC programming shortens development schedule. (IL/ST/LD/FBD/SFC) CODESYS control kernel Soft-PLC supports real-time 50 μs processing cycle time and is equipped with standard industrial Ethernet and fieldbus protocols for easy connection with a variety I/O in the field. Comprehensive diagnostics functionality display, check and detect bus status, messages, communication problems, and error codes directly from controller application. With a distributed control structure design users can easily maintain and upgrade their controller for a variety of applications.

Seamlessly IT-OT Integrated Communication Protocols

In a connected Industry 4.0 architecture, modern controllers also exchange their information with other systems. The CODESYS PLC handler is an easy-to-use software interface (API) for the communication between CODESYS controllers and external client systems. An external client like a service panel can access the IEC 61131-3 variables and the online services of the controller using this API. OPC UA and MQTT (Sparkplug) are another standard Interface for communication in smart factory systems. Moreover, the ODBC the function also provides a standard format that gives the user easy access to a variety of database like MySQL, SQLite, MsSQL etc.

Turn your PLC into a Motion Controller

Develop your motion tasks without leaving your familiar logic controller development environment. CODESYS SoftMotion is an add-on component for the system and is seamlessly integrated in the IEC-61131-3 development interface. Thanks to the integration and availability of logic and motion control in one device with a single engineering interface, you save costs for additional hardware and engineering tools. Cabling and data exchange between logic and motion control are greatly simplified. SoftMotion controls single-axis and synchronized multi-axis movements like electronic cams or electronic gears. CNC robots could convert G-code, handling Interpolator overrides, coordinate transformations, path pre-processing and modulation, and even 2D/ 3D Kinematics for up to 6-axis robots.

Make Your Machinery more Intelligent

Edge controller default package includes SoftPLC and Visualization tools. Users can visit Advantech's WISE-Marketplace to upgrade licenses for SoftMotion or CNC Robotics. The Platform Portal utility's self-diagnosis function enhances controller reliability and lets the user monitor hardware information and CODESYS task updates. Furthermore, Advantech WISE-PaaS platform can be leveraged for field-side management to enhance productivity and equipment flexibility. With these add-on value features, users can realize Industrial 4.0 smart manufacturing.
